Research Summary

Experienced natural language processing researcher passionate about creatively enhancing and leveraging the capabilities of language models for meaningful problems, including commonsense reasoning, question answering, rewriting, debiasing, and summarization.

Education

University of Washington *Seattle, WA*
M.S. in Computer Science (GPA: 3.99) June 2023

University of Washington *Seattle, WA*
B.S. in Computer Science, Applied Math, and Bioengineering; Cum Laude (GPA: 3.86) June 2021

- Honors: Outstanding Senior Award (computer science), Levinson Emerging Scholar, Dean's Medal Nominee

Experience

xlab, Paul G. Allen School of Computer Science & Engineering *Sep 2020 – Present*
Undergraduate Researcher, Advisor: Yejin Choi Seattle, WA

Improving QA Models with Knowledge Augmentation ∼ *EMNLP 2022, main conference*

- Introduced a model to dynamically generate commonsense knowledge, which improves downstream QA models
- Utilized reinforcement learning with PPO to optimize the knowledge-generation model for fluency and helpfulness, based on feedback from an inference QA model as the reward

Rewriting Toxic Text ∼ *in submission to ACL 2023*

- Led project on rewriting text to reduce toxicity by identifying and replacing toxic spans while preserving meaning
- Developed novel method to identify salient tokens to edit by comparing logits between a domain-adapted toxic and non-toxic denoising model

Misinfo Reaction Frames ∼ *ACL 2022, main conference*

- Utilized novel commonsense framework to assess propaganda and misinformation techniques in media based on reader reactions and improved upon existing baselines for misinformation detection

H2Lab, Paul G. Allen School of Computer Science & Engineering *Jun 2021 – Present*
Undergraduate Researcher, Advisor: Hannaneh Hajishirzi Seattle, WA

Biases in QA Datasets and Models

- Led project assessing the underlying biases contained in question answering (QA) models and corresponding datasets
- Focused specifically on cultural bias and gender bias, demonstrating that the majority of open domain QA datasets and some models are biased towards entities from US culture

Noah's ARK, Paul G. Allen School of Computer Science & Engineering *Sep 2020 – Jun 2021*
Undergraduate Researcher, Advisor: Noah Smith Seattle, WA

Identifying Subtle Biases and Microagressions in News Headlines

- Proposed a new commonsense framework of subtle biases by incorporating *environmental context*
- Utilized a generative language model to automatically identify subtle biases in news headlines

Bloomberg *Jun 2021 – Aug 2021*
Software Engineering Intern, BLAW Search New York, NY

Zero Shot Tax Type Classification

- Constructed a list of 15 tax types based on user feedback on search platform and iterations through queries
- Developed and implemented two novel, zero-shot classification approaches for short text using LEGAL-BERT, achieving 67% performance on the test set (accuracy) compared to human annotators
